

## Rules for using the Han-Lab repository on GitHub

- Create a folder by your name and put your scripts only in that folder
- Try to comment out the top of your scripts in a global manner
  - e.g. : If it is a function, what are the inputs and what does the function outputs
  - If it is a script, what does it do – plots all figures in a Paper/ Makes a big database / Does some preprocessing – I hope you get it. Just for the sake of letting people know what is the magic going on
- Use R-studio to commit and push your work. Please use lab workstations to push your work.
- <https://www.youtube.com/watch?v=E2d91v1Twcc> : Video instructing you on how to use R-studio and GitHub.
- Raise an issue when in doubt. People around will get back!
